Description

Production and processing of organic vegetables

EMISIA GREENHOUSE D.O.O. was founded in 2015 with a goal of growing hydroponic organic vegetables as well as promoting healthy diets and lifestyles in general.

For the first two years we were engaged in experimental production of various vegetables: tomatoes, peppers, aubergines, courgettes, peas, beans, cucumbers with the exceptional results.

In 2018 we focused primarily on the production and sale of the varieties of tomato without the use of any kind of pesticides or insecticides. What we got is a premium quality product of the unique flavour and aroma. Our production is limited as we only process the tomato we grow, therefore we can guarantee the consistent quality of the products. On BS F2019 we are bringing six of our products "Iz moje baste" - dried tomatoes in extra virgin cold pressed 100% olive oil with spices.

As for the next year, we are planning to expand our product scope by introducing processed fruit made in an entirely natural and healthy way.

Organization Type

Private company
